

RENCO ELECTRONICS, INC.

"Precisely the best coils and transformers"

RoHS and REACH Compliance Statement

July, 2010

Due to environmental concerns, the need for hazardous substance restrictions in electronic components and systems, are receiving increasing attention within our industry. As of January 1st, 2006 Renco Electronics Inc. has converted all products to lead-free manufacturing, unless otherwise specified per the exemption listed below, and is 100% compliant with the RoHS Directive 2002/95/EC. In order to achieve RoHS compliance, the products may not contain more than the acceptable levels of the listed restricted substances within the RoHS 2002/95/EC directive.

- Tin-Lead solder has been replaced with Tin-Copper solder. Renco Engineering has incorporated this alternative to best suite our customers applications.
- Products will be compatible with lead-free reflow processes, as well as continuing to remain compatible with actual processes.

Regulation (EC) No 1907/2006 of the European Parliament and of the Council of 18 December 2006 concerning the Registration, Evaluation, Authorization and Restriction of Chemicals (REACH), establishes a European Chemicals Agency to regulate chemicals and their safe use. An original list of 16 candidate SVHC (Substances of Very High Concern) was published and is continually updated with more candidate SVHC. Renco Electronics Inc. customers will be informed when any candidate SVHC is present in products above a threshold limit of 0.1% (1,000 ppm). At the present time, Renco Electronics Inc. products do not contain any of the 38 candidate SVHC above 0.1%.

Exemptions: Renco Electronics is committed to working with our customers. Renco shall continue to support products with tin-lead applications for customers with specific needs. Such needs must be specified on the purchase order, in order to ensure the requirements are met.

Confirmation of the above and other statements made in Renco Electronics compliance-related documentation, including but not limited to any material composition data, MSDS, laboratory and testing reports, are to the best of our knowledge valid and accurate as at the date of the corresponding CoC. Renco makes no representation to the completeness and accuracy of information provided herein to the extent such information is provided by Renco.

Travis W. Rensing
